HYATT LAKE WATERSHED DRAWING MAP

Watershed Mapping: Grades 6-8 Hyatt Lake

To draw an **estimated watershed area** around Hyatt Lake (area of land that flows into the lake), follow these directions:

1. Imagine the area of land where water will funnel down into Hyatt Lake.
2. Trace along all streams that flow into Hyatt Lake. (Hint: Burnt Creek does not flow into the lake) 
3. Draw triangles at the highest peaks/mountains around Hyatt Lake. (Hint: Look at the elevations in feet). 
4. Draw a line going through the highest peaks around the lake that include the streams that flow into the lake. This is your estimated watershed!
